

Transport Safety Lights

Be seen. Be safe. Light up your equipment to make it more noticeable during transport, day or night, to reduce accidents.

How AppliMax Transport Safety Lights make you safer on the road

While your equipment may be large and noticeable during the day, when the light is lower or it's dark your equipment is less noticeable, especially vehicles coming from cross-roads. The high intensity amber and red LED flashing lights outline the extremities of your equipment and make it more noticeable and prompt drivers to slow down when approaching or passing.
